LASER SERVICES

PHOTO REJUVENATION (SCITON: BBL – HERO)

A preventative and corrective regimen utilizing cutting-edge technology of broadband light to treat sun damage, brown spots, rosacea, facial flushing, and irregular skin pigmentation on numerous areas of the body. Melanin-producing cells are destroyed without damaging the skin's surface. With this procedure, skin will visibly look younger year after year.

FRACTIONAL RESURFACING (SCITON: HALO)

A unique hybrid technology that triggers the skin's natural healing response to improve the skin's tone and texture. Halo decreases fine lines, wrinkles, pore size, and provides the skin with a more youthful glow. It also diminishes age spots, sunspots, and unwanted discoloration. All of which improves visible signs of aging.

LASER ENERGY TREATMENT (SCITON: MOXI)

Non-ablative treatment targets water within cells to work with the body's natural healing processes for an effective treatment with little-to-no downtime. Correct signs of sun damage, uneven skin tone, rough texture and signs of aging. No matter the season or skin type, brighten and refresh your skin for a glowing and clear complexion.

MICRO LASER PEEL

This procedure can reduce wrinkles and improve discoloration by eliminating a thin layer of skin. Once this thin layer is removed, it allows for fresh skin to resurface the treated area.

NANO LASER PEEL

This treatment also known as the “Weekend Peel” earned its name as patients are comfortable returning to work with just a few days of downtime. This treatment will improve mild wrinkles, scars, keratosis, sun damage and pigment irregularities.

LASER HAIR REDUCTION

This service provides pain-free results almost anywhere on the body. A concentrated beam of light passes over the hair follicles to damage them enough to retard future hair growth.

MIRADRY

Quick, non-invasive procedure that eliminates sweat glands and provides a lasting solution for excessive underarm perspiration.

SKINTYTE

A treatment that delivers an advanced infra-red light to deeply heat your skin while cooling and protecting the entire surface at the same time. Light energy is distributed in rapid, gentle pulses to initiate the body's natural healing process, which leads to improved appearance of sagging skin.

Prices vary based on provider and service offering.
