LASER SERVICES

PHOTO REJUVENATION (SCITON: BBL – HERO)

A preventative and corrective regimen utilizing cutting-edge technology of broadband light to treat sun damage, brown spots, rosacea, facial flushing, and irregular skin pigmentation on numerous areas of the body. Melanin-producing cells are destroyed without damaging the skin's surface. With this procedure, skin will visibly look younger year after year.

LASER ENERGY TREATMENT (SCITON: MOXI)

Non-ablative treatment targets water within cells to work with the body's natural healing processes for an effective treatment with little-to-no downtime. Correct signs of sun damage, uneven skin tone, rough texture and signs of aging. No matter the season or skin type, brighten and refresh your skin for a glowing and clear complexion.

FOREVER CLEAR

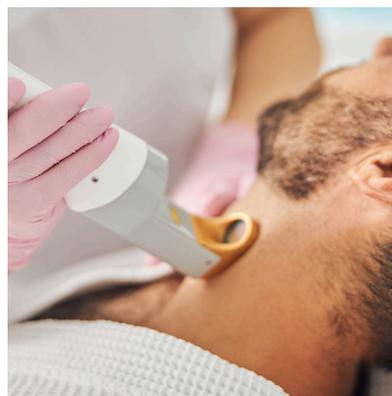

This non-invasive acne treatment uses broadband light (BBL) technology to target acne by killing bacteria, reducing inflammation, and promoting healing through a three-step process of blue, yellow, and infrared light.

LASER HAIR REDUCTION

This service provides pain-free results almost anywhere on the body. A concentrated beam of light passes over the hair follicles to damage them enough to retard future hair growth.

SKINTYTE

A treatment that delivers an advanced infra-red light to deeply heat your skin while cooling and protecting the entire surface at the same time. Light energy is distributed in rapid, gentle pulses to initiate the body's natural healing process, which leads to improved appearance of sagging skin.

Prices vary based on provider and service offering.
